

Citation Network Topology

The intra-corpus citation network provides a structural view of how Active Inference research is organized, identifying influential hub papers, community structure, and patterns of citation isolation.

Citation Network (100 nodes, 765 edges)

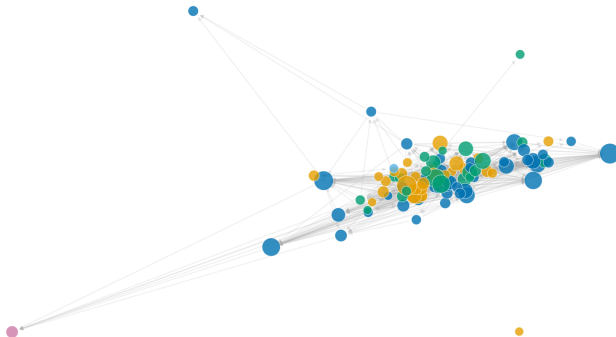

Figure 1: Intra-corpus citation network ($N = 785$ nodes, 1,873 edges). Node size reflects PageRank and HITS centrality scores kleinberg1999authoritative; highly cited foundational papers serve as
